Target version:	1.7.1		
Forum topic:			
Description			
<p>When the CLOSE section of an unloaded module M loads itself indirectly, e.g. by calling Kernel.ThisMod(N) for a module N that imports M, the resulting module list contains N but not M. This leads to recursive traps later on.</p> <p>Reported by x512, 2016-11-20.</p>
